ПОШУК

ПОЗНАЧКИ

[APACHE](#)[AUTORUN](#)[BASH](#)[BITCOIN](#)[BLOCKCHAIN](#)[COMPOSER](#)[CRYPTOCURRENCY](#)[CSS](#)[DATABASE](#)[DJANGO](#)[DOCKER](#)[ELOQUENT](#)[ENGLISH](#)[ENUM](#)[GAMES](#)[GIMP](#)[GIT](#)[HTML](#)[JAVA](#)[JAVASCRIPT](#)[JQUERY](#)[LARAVEL](#)[MERCURIAL](#)[PARSING](#)[PHOTOSHOP](#)[PHP](#)[PHPSTORM](#)

```
1 [paths]
2 default = http://myserver/hg/repo1
3 default-push = ../mytestrepo
4
5 [ui]
6 username = Firstname Lastname <firstname.lastname@example.net>
7 verbose = True
8
9 [alias]
10 killitwithfire = revert --no-backup --all
```

перевірка через командний рядок:

```
1 hg paths gives the relationship between each path name and its url.
2
3 > hg paths
4 default = ssh://hg@example.org/repo
5 local = /local/path/to/repo
6 hg paths <name> gives the url for the name.
7
8 > hg paths default
9 ssh://hg@example.org/repo
10
11 > hg paths local
12 /local/path/to/repo
13 BTW, to get just the path names:
14
15 > hg paths -q
16 default
17 local
```

СПИСОК КОМАНД:

Commands	Description
hg pull	get latest changes like git pull use flags like -u IDK why yet
hg add	only for new files
hg commit	add changes to commit with -m for message just like git

НЕДАВНІ КОМЕНТАРІ

Commands	Description
hg addremove	adds new files and removes file not in your file system
hg incoming	see changes committed by others
hg outgoing	see local commits
hg commit --amend	same as <code>git commit --amend</code>
hg record filename	shows history of changes to file uses extension
hg merge	like a <code>git merge</code> http://hgbook.red-bean.com/read/a-tour-of-mercurial-merging-work.html
hg log -r tip	tip changelog
hg log -l 5	last 5 changelog statuses
hg status -m	show modified files only
hg status -r	show removed files only
hg status -a	show added files only
hg strip "0000"	remove commit from history and delete changes before push, if pushed you are fucked
hg log -u email@accout.com	see all account commits type -v for a verbose version
hg diff -r 0000:0000 /dir/location/path	Diff versions of same file from different CHANGESSET
hg diff less; hg commit	show changes committed
hg out	See what is not pushed to remote branch

Commands	Description
hg update 0000	CHANGESET = 0000 or branchname
hg checkout branch	works like a <code>git checkout branch</code>
hg record	shows record of pending changes
hg update -C	resets your head and removes commits not pushed like <code>git reset -hard</code>
hg backout 0000	CHANGESET = 0000 like a <code>git revert tag/hash</code>
hg blame or hg annotate	same as a git blame
hg bisect	lets you test inbetween commits to find bugs http://mercurial.selenic.com/wiki/BisectExtension
hg shelve	like a <code>git stash</code> (Requires the ShelveExtension or the AtticExtension.)
hg graft --edit 0000	lets you pick what changes to push to default or commit CHANGESET = 0000 <code>git cherry-pick <commit></code> http://selenic.com/hg/help/graft
hg graft --edit 0000::0005	add a series of commits from 0000 to 0005 as a batch
hg heads	shows changes in child and parent branches
hg identify --num	current changeset
hg branch feature	go to default branch and use this command to create a new branch named "feature" based off of it
hg commit --close-branch -m 'closing this branch'	Inside branch you want to close commit this and push so branch disappears and keeps your coworkers happy

Commands	Description
note	Hg .hgignore, syntax: glob is the same behaviour as git's .gitignore.
